

Flexible Transportation Built with Your Highest Acuity Members in Mind

Special Needs Plans (SNPs) provide life-sustaining care to millions of the most vulnerable populations. As SNPs enrollment grows, so do the complex medical and social needs of members. With SafeRide Health, your health plan and members have access to the right technology and flexibility to meet their care needs.

Why SafeRide?

One of the largest and most experienced transportation brokers in the nation, SafeRide Health partners with the largest payers and providers serving SNP beneficiaries to drive better health outcomes for the most vulnerable. SafeRide Health’s technology-first non-emergency medical transportation (NEMT) approach empowers plans with customized tools to support positive health outcomes for vulnerable patient populations.

With 87% of SNPs offering transportation benefits, it's not about if you do offer them– **it's about how well you're serving member needs.**

Key Features for SNPs

	SafeRide <u>Health</u>	Other Brokers
Native Rideshare Integration	●	◐
APIs for Platform Integration	●	○
Fraud, Waste, and Abuse Prevention	●	○
Benefit Structure Customization	●	○

Our Technology, Your Workflows

Our self and fully managed solutions seamlessly integrate into your existing workflows via industry-leading APIs. With the fully managed solution, our call center handles the ride booking and management calls, allowing plans to focus on what they do best, servicing members and running plan operations. For the self-managed solution, you utilize your call center's resources and expertise while harnessing our platform training for more visibility and control over the end-to-end member experience.

Benefit Structure Customization

With variables like chronic conditions and recurring needs for SNP members, transportation benefit needs are far from being one size fits all. SafeRide's customizable platform enables plans to tailor and optimize benefit structures to best meet their members' needs. We can build countless customizations for beneficiaries based on treatment type, ride count, cost, distance, and necessary modality level of transportation.

Proactive FWA Detection & Prevention

For SNP members with complex care needs and high ride utilization, maintaining benefit integrity is critical to ensuring access remains reliable and sustainable. SafeRide helps plans proactively detect and prevent fraud, waste, and abuse (FWA) through real-time ride monitoring, advanced analytics, and configurable program controls that identify anomalies before they escalate. Continuous oversight, audit-ready reporting, and built-in safeguards ensure rides are used appropriately and align with plan policy. This proactive approach protects limited program dollars, supports regulatory compliance, and enables plans to confidently extend transportation benefits to their most vulnerable members.

When it comes down to the day of the ride, whether traveling via rideshare or stretcher gurney, we support every member's journey with:

1 SMS texting real-time updates on ride status from start to finish

2 Live ride monitoring to ensure safety and timeliness

3 Proprietary algorithms to redirect to a new driver if needed

4 Same-day transportation team to triage any issues in real-time

5 Ride feedback opportunities on rides to repeat or avoid specific drivers in the future
